

Exercise #1

Write a program that creates an array with four different names in it. Next, create a for loop that prints each name in all uppercase letters. Finally, create a foreach loop that prints each name in all lowercase letters. Name your program ArrayAllCaps.php.

Exercise #2

Write a program that creates an array with four different names in it. Next, create a for loop (or foreach loop) that calculates the total length of all of the names. Name your program ArrayNameLength.php.

Exercise #3

Write a program that creates an array with four different name in it. Next, use a for loop to create a second array that contains the names in the first array but in reverse order. Finally, use two for each loops to print both arrays. Name your program ArrayReverse.php.
